

TYPICAL

TC131 SERIES

COMPUTER-CONTROLLED CYCLE MACHINE
WITH INPUT FUNCTION

INSTRUCTION BOOK
PARTS CATALOGUE

XI'AN TYPICAL INDUSTRIES CO.,LTD.

Thank you very much for buying a our company's sewing machine. Before using your new machine, please read the safety instructions below and the explanations given in the instruction manual.

With industrial sewing machines, it is normal to carry out work while positioned directly in front of moving parts such as the needle and thread take-up lever, and consequently there is always a danger of injury that can be caused by these parts. Follow the instructions from training personnel and instructors regarding safe and correct operation before operating the machine so that you will know how to use it correctly.

SAFETY INSTRUCTIONS

1. Safety indications and their meanings

This instruction manual and the indications and symbols that are used on the machine itself are provided in order to ensure safe operation of this machine and to prevent accidents and injury to yourself or other people.

The meanings of these indications and symbols are given below.

Indications

	DANGER	The instructions which follow this term indicate situations where failure to follow the instructions will almost certainly result in death or severe injury.
	CAUTION	The instructions which follow this term indicate situations where failure to follow the instructions could cause injury when using the machine or physical damage to equipment and surroundings.

Symbols

This symbol  indicates something that you should be careful of. The picture inside the triangle.) indicates the nature of the caution that must be taken.
(For example, the symbol at left means "beware of injury".)

This symbol  indicates something that you must not do.

This symbol  indicates something that you must do. The picture inside the circle indicates the nature of the thing that must be done.
(For example, the symbol at left means "you must make the ground connection".)

2. Notes on safety

DANGER

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the face plate of the control box. Touching areas where high voltages are present can result in severe injury.

CAUTION

Environmental requirements

Use the sewing machine in an area which is free from sources of strong electrical noise such as high-frequency welders.
Sources of strong electrical noise may cause problems with correct operation.

Any fluctuations in the power supply voltage should be within $\pm 10\%$ of the rated voltage for the machine. Voltage fluctuations which are greater than this may cause problems with correct operation.

The power supply capacity should be greater than the requirements for the sewing machine's electrical consumption.
Insufficient power supply capacity may cause problems with correct operation.

The ambient temperature should be within the range of 5°C to 35°C during use.
Temperatures which are lower or higher than this may cause problems with correct operation.

The relative humidity should be within the range of 45% to 85% during use, and no dew formation should occur in any devices.
Excessively dry or humid environments and dew formation may cause problems with correct operation.

Avoid exposure to direct sunlight during use.
Exposure to direct sunlight may cause problems with correct operation.

In the event of an electrical storm, turn off the power and disconnect the power cord from the wall outlet.
Lightning may cause problems with correct operation.

Installation

Machine installation should only be carried out by a qualified technician.

Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.

The sewing machine weighs approximately 73 kg.
The installation should be carried out by two or more people.

Do not connect the power cord until installation is complete, otherwise the machine may operate if the foot switch is depressed by mistake, which could result in injury.

Hold the machine head with both hands when tilting it back or returning it to its original position.
Furthermore, after tilting back the machine head, do not push the face plate side or the pulley side from above, as this could cause the machine head to topple over, which may result in personal injury or damage to the machine.

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

All cords should be secured at least 25 mm away from any moving parts. Furthermore, do not excessively bend the cords or secure them too firmly with staples, otherwise there is the danger that fire or electric shocks could occur.

Install the safety covers to the machine head and motor.

If using a work table which has casters, the casters should be secured in such a way so that they cannot move.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result.

Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhoea.

Keep the oil out of the reach of children.

CAUTION

Sewing

This sewing machine should only be used by operators who have received the necessary training in safe use beforehand.

The sewing machine should not be used for any applications other than sewing.

Be sure to wear protective goggles when using the machine.

If goggles are not worn, there is the danger that if a needle breaks, parts of the broken needle may enter your eyes and injury may result.

Turn off the power switch at the following times, otherwise the machine may operate if the foot switch is depressed by mistake, which could result in injury.

When threading the needle

When replacing the needle and bobbin

When not using the machine and when leaving the machine unattended

If using a work table which has casters, the casters should be secured in such a way so that they cannot move.

Attach all safety devices before using the sewing machine. If the machine is used without these devices attached, injury may result.

Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.

If an error occurs in machine operation, or if abnormal noises or smells are noticed, immediately turn off the power switch. Then contact your nearest Brother dealer or a qualified technician.

If the machine develops a problem, contact your nearest Brother dealer or a qualified technician.

Cleaning

Turn off the power switch before carrying out cleaning, otherwise the machine may operate if the foot switch is depressed by mistake, which could result in injury.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they

do not get into your eyes or onto your skin, otherwise inflammation can result.

Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhoea.

Keep the oil out of the reach of children.

Maintenance and inspection

Maintenance and inspection of the sewing machine should only be carried out by a qualified technician.

Ask your Brother dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.

Turn off the power switch and disconnect the power cord from the wall outlet at the following times, otherwise the machine may operate if the foot switch is depressed by mistake, which could result in injury.

When carrying out inspection, adjustment and maintenance

When replacing consumable parts such as the rotary hook

If the power switch needs to be left on when carrying out some adjustment, be extremely careful to observe all safety precautions.

Hold the machine head with both hands when tilting it back or returning it to its original position.

Furthermore, after tilting back the machine head, do not push the face plate side or the pulley side from above, as this could cause the machine head to topple over, which may result in personal injury or damage to the machine.

Use only the proper replacement parts as specified by our company's.

If any safety devices have been removed, be absolutely sure to re-install them to their original positions and check that they operate correctly before using the machine.

Any problems in machine operation which result from unauthorized modifications to the machine will not be covered by the warranty.

3.Warning labels

The following warning labels appear on the sewing machine.

Please follow the instructions on the labels at all times when using the machine.If the labels have been removed or are difficult to read, please contact your nearest dealer.

1

2

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

3

Direction of operation

Safety devices:

- (A)Eye guard
- (B)Tension release solenoid cover
- (C)Thread take-up cover
- (D)Back cover,etc.
- (E)Frame side cover

1. NAMES OF MAJOR PARTS

- (1) Power switch
- (2) Control box
- (3) SD slot
- (4) Operation panel
- (5) Switch of pedal
- (6) Middle presser foot
- (7) Pulley
- (8) Cotton stand

- Safety devices**
- (9) Eye guard
 - (10) Thread take-up cover
 - (11) Back cover
 - (12) Frame side cover
 - (13) Tension release solenoid cover
 - (14) Presser frame

2. SPECIFICATIONS

	TC131-0705
Stitch formation	Single needle lock stitch
Maximum sewing speed	2700rpm
Pattern size(X×Y)	70×50mm
Feed mechanism	Y-0 intermittent feed mechanism (pulse-motor driven mechanism)
Stitch length	0.1-12.7mm
Number of stitches	Variable (Refer to "Program List" for details on the number of stitches for sewing patterns that are already preset.)
Maximum stitch number	400,000 stitches
Work clamp lifter	Pulse-motor driven mechanism
lift of presser frame	17mm max.
stroke of middle presser foot	5mm
Rotary hook	Shuttle hook
Wiper device	Standard equipment
Thread trimmer device	Standard equipment
lift of middle presser foot	16mm
Data storage method	Flash memory (Any sewing pattern can be added using SD card)
Number of stored data	3 sewing patterns are set already
Motor	AC servo motor 450 W
Power source	220V+10% 50HZ(others are optional)

3. INSTALLATION

 CAUTION	
 Machine installation should only be carried out by a qualified technician.	 All cords should be secured at least 25 mm away from any moving parts. Furthermore, do not excessively bend the cable or secure it too firmly staples, otherwise there is the danger that fire or electric shocks could occur.
 Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done. The sewing machine head weighs approximately 56 kg. The installation should be carried out by two or more people.	
 Do not connect the power cord until installation is complete, otherwise the machine may operate if the foot switch is depressed by mistake, which could result in injury.	 Be sure to connect the ground: If the ground connection is not secure, you run the risk of receiving a serious electric shock, and problems with correct operation may also occur.
 Hold the machine head with both hands when tilting it back or returning it to its original position. Furthermore, after tilting back the machine head, do not push the face plate side or the pulley side from above, as this could cause the machine head to topple over, which may result in personal injury or damage to the machine.	 Install the safety covers to the machine head and motor.

3-1.Installing the cotton stand

(1) Cotton stand

Note:

Securely tighten the nut (4) so that the two rubber cushions (2) and the washer (3) are securely clamped and so that the cotton stand (1) does not move.

3-2.Lubrication

The sewing machine should always be lubricated and the oil supply replenished before it is used for the first time, and also after long periods of non-use.

Use only the lubricating oil specified by our company's.

1. Fill the oil tank with oil.

Note

Fill the machine with oil when the oil level is down to about one-third full in the oil sight glass. If the oil drops below this level, there is the danger that the machine may seize during operation.

2. Pour oil in through the two holes (1) of the shuttle race base assembly so that the felt is lightly moistened.

Note:

If there is no more oil on the felt of the shuttle race base assembly, problems with sewing may result.

3. If using the liquid cooling tank (2), fill it with silicon oil (100 mm² /s).

3-3.Starting up

1.Turn on the power switch.

2.Tread pedal 2 to position 1 could select pattern , tread pedal 1 to position 1 presser foot lift

4、PREPARATION BEFORE SEWING

4-1. Installing the needle

CAUTION

Turn off the power switch before installing the needle, otherwise the machine may operate if the foot switch is depressed by mistake, which could result in injury.

1.Loosen the set screw (1).

2.Insert the needle (2) in a straight line as far as it will go, making sure that the long groove on the needle is at the front, and then securely tighten the screw (1).

4-2.Threading the upper thread

Thread the upper thread correctly as shown in the illustration below.

* When using threading mode for threading, the tension discs (1) will open so that the thread can be threaded more easily.

<Threading mode>

Threading mode is safe because the sewing machine will not start even when the foot switch is depressed.

1. Turn on the power switch.

2. ● The work clamp /button clamp will lower
- The tension discs will open.

Press the THREAD/CLAMP key.

All indicators switch off
THREAD/CLAMP indicator lights
Menu indicators switch off

3. Threading the thread.

- When 5 minutes have passed, the buzzer will sound and the tension discs will close.

4. Ending threading mode

Press the THREAD/CLAMP key.

- The work clamp/button clamp will return to where it was before threading mode was started.

THREAD/CLAMP indicator switches off

4-3. Winding the lower thread

CAUTION

Do not touch any of the moving parts or press any objects against the machine while winding the lower thread, as this may result in personal injury or damage to the machine.

1. Place the bobbin onto the bobbin winder shaft (1).
2. Thread the thread as shown in the illustration, wind the thread around the bobbin several times, and then press the bobbin presser arm (2).
3. Turn on the power switch.
4. Tread pedal 1 to position 1, could check up origin position
5. Make sure needle will not strike presser foot then push button TENSION/WIND (3) and tread pedal 2 to position 1 at the same time.
6. When machine start working release button TENSION/WIND (3), keep on treading pedal 2 until thread winding finished. If release pedal during thread winding, please push button TENSION/WIND (3) once again and tread pedal 2 thread winding will start again.
7. When thread winding reaches the regulated amount (80–90% of bobbin's outside diameter), it should be stopped. Bobbin holder will come back automatically; thread pedal 2 to position 0. Thread winding finished.
8. Remove the bobbin, hook the thread onto the knife (4), and then pull the bobbin in the direction of the arrow to cut the thread.

Adjusting the bobbin winding amount

Loosen the screw (5) and move the bobbin presser (6).

If the thread winds onto the bobbin unevenly

Loosen the set screw (7) and move the bobbin wider tension assembly (8) up and down to adjust.

* For case A, move the bobbin winder tension assembly (8) down, and for case B, move it upward.

4-4. Installing the bobbin case

CAUTION

Turn off the power switch before installing the bobbin case, otherwise the machine may operate if the foot switch is depressed by mistake, which could result in injury.

1. Pull the shuttle race cover (1) downward to open it.
2. While holding the bobbin so that the thread winds to the right, insert the bobbin into the bobbin case.
3. Pass the thread through the slot (2) and pull it out from the thread hole (3).
4. Check that the bobbin turns in the direction of the arrow when the thread is pulled.
5. Pass the thread through the lever thread hole (4), and then pull out approximately 30 mm of thread.
6. Hold the latch on the bobbin case and insert the bobbin case into the rotary hook.

5. SEWING

CAUTION

Turn off the power switch at the following times, otherwise the machine may operate if the foot switch is depressed by mistake, which could result in injury.

- When threading the needle
- When replacing the needle and bobbin
- When not using the machine and when leaving the machine unattended

Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.

1. Turn on the power switch.
2. Press the Δ or ∇ key (1) to select the number for the program to be sewn.
3. Tread pedal 2 to position 1, select program, tread pedal 1 to position 1, presser foot lift
4. Put fabric under presser foot 2
5. Tread panel 1 to position 2 presser foot comes down.
6. Tread pedal to position 1 machine start working.

7. Once sewing is completed and the thread has been trimmed, the work clamp (2) will rise.

6.ADJUSTING

6-1 Thread tension

6-1-1 Lower thread tension

Adjust the thread tension to the weakest possible tension by turning the thread tension nut (1) until the bobbin case will not drop by its own weight while the thread end coming out of the bobbin case is held.

6-1-2. Upper thread tension

Turn the tension nut (1)(main tension) to adjust the tension as appropriate for the material being sewn.

Furthermore, turn the tension nut (2) (sub-tension) to adjust the remaining length of upper thread to 35 – 40 mm, when the thread take-up lever is not used.

Reference thread tension

Use	TC131
Upper thread	#30 or equivalent
Lower thread	#50 or equivalent
Upper thread tension (N)	1.6–2.0
Lower thread tension (N)	0.2–0.3
Pre-tension (N)	0.05–0.3
Needle	DP×17 #19

Note: The thread may break due to heat under some sewing conditions. If this happens, reduce the sewing speed, or use the liquid cooling tank.

7. MAINTENANCE

7-1. Cleaning the rotary hook

1. Pull the shuttle race cover downward to open it, and then remove the bobbin case.
2. Open the setting claw (1) in the direction indicated by the arrow, and then remove the shuttle race base (2) and the shuttle hook (3).
3. Clean all the dust and thread ends from around the driver (4), the top of the rotary hook thread guide and the shuttle race.

7-2. Draining the oil

1. Remove and empty the waste oil container (1) whenever it is full.
2. After emptying the waste oil container (1), screw it back into its original position.

7-3. Cleaning the eye guard

Wipe the eye guard clean with a soft cloth.

Note:

Do not use solvents such as kerosene or thinner to clean the eye guard.

7-4. Checking the needle

Always check that the tip of the needle is not broken and also the needle is not bent before starting sewing.

7-5. Lubrication

Carry out the lubrication referring to "3-12 lubrication"

7-6. Applying grease

1. Turn off the power switch.
2. Remove the screw (2). (Refer to the separate page for greasing locations.)
3. While turning the machine pulley by hand to move the needle bar up and down, apply grease to each hole until the grease overflows slightly.
4. Tighten the screw (2) to push in the grease.
5. Turn the machine pulley by hand to move the needle bar up and down several times in order to disperse the grease.
6. Use a cloth to wipe away any excess grease from around the screw (2).

Note:

- Once the grease tube has been opened, remove the nozzle from the tube, attach the cap securely and store the tube in a cool dark place.
 - The grease should be used as quickly as possible.
 - When using the grease again, remove any old grease from inside the nozzle first
- (Store the tube away carefully once the tube has been opened, otherwise the grease remaining inside the tube may deteriorate, and this may affect its lubricating performance.)

Trouble shooting

Trouble	Cause	Check point	Remedy
Thread breaks	Surface thread tension is too strong needle is not properly installed Thread is too big thick for the needle Bottom thread tension is too strong	Surface thread tension Needle direction Needle and Thread Bottom thread tension	Adjust the tension Needle slot face the front Choose the needle and thread Adjust the tension
Thread slips out of needle at first stitch	Space between needle and hook is too big Needle enter too much into the hook Needle bent Needle installed incorrectly	Space between needle and hook Space between needle and hook Needle bent Needle direction	Adjust the Space between needle and hook Adjust the Space between needle and hook Choose the needle and thread and change the needle Needle slot face the front
Needle breaks	Needle touch the hook Needle bent Wrong sewing Swing hook too high	Space between needle and hook Needle bent needle and fabric not in synchronization Height of the Swing hook	Adjust the Space between needle and hook Choose the needle and thread and change the needle Adjust the needle and fabric in synchronization Adjust the Height of the Swing hook

Trouble shooting

Trouble	Cause	Check point	Remedy
Thread not trimmed	fixed knife blunt thread cutting spring loose, moving knife cannot move in place moving knife cannot turn Surface thread Last stitch skip, moving knife cannot turn Surface thread moving knife wrong position	Fix knife blade thread cutting spring tension hook guide line position skip last stitch moving knife position	changing the moving knife changing the thread cutting spring put the hook guide line in same line with the hook Turn to the skip stitch adjust the moving knife position
Thread ensnared	picking spring too loose hook guide line not spread the thread	picking spring tension hook guide line position	adjust the picking spring tension and height put the hook guide line in same line with the hook
Thread tension poor	Surface thread tension too weak Bottom thread tension too weak	Surface thread tension Bottom thread tension	adjust the tension adjust the tension
Preeser foot does not rise	Footlifter motor problem Footlifter cam not Synchronization	Motor gear Footlifter cam Synchronization position	change motor Adjust Footlifter cam Synchronization position

This technical drawing is an exploded view of a mechanical assembly, likely a pump or valve mechanism. The components are numbered 1 through 53. The main body (1) is a cast housing with a central opening. A long shaft (7) passes through the body, supported by bearings (2, 3, 26, 27). A piston or plunger (5) is at the top of the shaft, with a seal (47) and a spring (30) above it. A lever arm (11) is attached to the side of the body. A long rod (24) is connected to the lever arm and a small arm (25). A spring (42) is attached to the rod. A foot (19) is at the bottom of the assembly. Various bolts (12, 14, 15, 21, 22, 31, 32, 33, 36, 37, 40, 41, 43, 44, 45, 46, 48, 50) and washers (13, 16, 17, 18, 19, 20, 23, 28, 29, 34, 35, 38, 39, 42, 43, 44, 45, 46, 48, 50) are shown in their respective positions. The diagram is a line drawing with no shading.
